

EDPlan Insight™

Position every student in Canada for success from early learning through college and careers.

PCG Canada (PCG's) EDPlan Insight solution is designed to help Canadian school districts, administrators, and educators leverage data to positively impact student learning, promote teacher effectiveness, and gain meaningful insights into school improvement initiatives.

Data to drive student success

The use of data to drive school improvement efforts is essential in today's education landscape. EDPlan Insight is an intuitive, modern technology platform designed to encourage and support a district-wide culture of data use, from the classroom teacher up to the superintendent's office. With student and performance data already built in from the student information system and provincial data, educators have immediate access to a wide variety of data critical to improving outcomes and positioning students for success in school.

Administrators can monitor the progress of school improvement plans, and teachers are able to focus on the needs of individual students with data to identify areas of concern. Across the district, EDPlan Insight promotes a culture of communication, transparency, and accountability.

Use data more effectively to...

Personalize learning for student success

Inform instruction & intervention strategies

Drive school improvement

Features

- Comprehensive Student Profile providing evidence of the student's learning throughout the school year and growth over time
- Real-time access and exports of data supporting instruction and learning
- Customized dashboards and reporting models that meet local and provincial needs
- Multi-platform model that supports secure use on mobile devices and multiple browsers
- Direct exports to PDF, Excel, PowerPoint, Word, and XML in a clean and graphical format
- Quick start-up and implementation supported by Canadian cloud-based technology access

Benefits

- Manages student performance and achievement data for all students
- Provides tools to set up and manage local district assessments
- Provides subscription push reporting services that can be scheduled and managed by the district
- Utilizes a collaborative inquiry model of support across the school and district
- Supports a culture of district-wide data use
- Provides evidence to support systemic changes to instructional practices
- Encourages student-focused teaching by enabling effective problem solving

Turnkey Technology System

- Complete **student profiles** to provide comprehensive information about learning and progress
- **Class profiles** that securely show student performance information
- District data **dashboards and reports** that dynamically manage and track information
- **District assessments management** to set up and track district/school assessments
- **Provincial assessments** that can be easily imported to look at overall student performance
- **Leadership reporting** to provide key district leaders with critical data for making informed decisions
- **Indigenous tracking management services** and tasks for the success of learning outcomes
- **Human Resources (HR) reporting** to provide comprehensive data analysis and align with student/school instruction
- **Integrated with Student Information Systems (SIS)**—currently MyEd (Follett), PowerSchool, Maplewood and Trillium

Implementation and Training Tools

- Train-the-trainer models to enhance learning
- Online training for professional development
- Monthly online collaboration sessions

Cloud-Based Canadian Hosting Services

- Secure, responsive, and scalable enterprise cloud computing platform

Packaged Pricing Model

Bundled Package:

- Technology multi-year licensing
- Implementation and training
- Consulting services
- Cloud-based hosting services

Optional Services:

- Instructional Consulting services
- District/School improvement planning
- Data coaching
- Leadership training
