

EDPlan Insight™

Position every student in Canada for success from early learning through college and careers.

PCG Canada (PCG's) EDPlan Insight solution is designed to help Canadian school districts, administrators, and educators leverage data to positively impact student learning, promote teacher effectiveness, and gain meaningful insights into school improvement initiatives.

Data Analytics to drive student success

The use of data to drive school improvement efforts is essential in today's education landscape. EDPlan Insight is an intuitive, modern technology platform designed to provide up-to-date data that encourages in-depth discussion around how to support each learner, groups of learners, and the school or district populations. With student and performance data already built in from the student information system and provincial data, educators have immediate access to a wide variety of meaningful data to position students for success.

Administrators can monitor the progress of school improvement plans, and teachers are able to focus on the needs of individual students with data to identify areas of concern.

Our Advanced Analytics solution provides educators with the ability to run "predictive data models" to determine student potential and needs. Across the district, EDPlan Insight promotes a culture of communication, transparency, and accountability.

Use data more effectively to..

Personalize learning for student success

Inform instruction & intervention strategies

Drive school improvement

What We Offer

We provide data-driven tools including:

Student Profiles: Comprehensive profiles that document the student's learning progress and growth throughout the school year.

Real-Time Data Access: Offer immediate access to data and export capabilities that support instructional and learning needs.

PowerBI Dashboards & Reporting:

Comprehensive dashboards and reporting models that cater to the needs of schools, districts, and provinces.

AI-Powered Predictive Analytics: Utilize advanced AI modeling to deliver predictive insights for better decision-making.

Multi-Platform Security: Ensure secure access to resources via a multi-platform model that supports mobile devices and multiple browsers.

Direct Data Exports: Provide seamless exports in a clean and graphical format.

Quick Start-Up & Implementation: Offer swift start-up and implementation, supported by Canadian cloud-based technology access.

Benefits of EDPlan Insight™

- **Manages student performance and achievement data for all students:** Data includes grade reporting marks, attendance, assessments (local & provincial), and all special demographic data.
- **Provides built-in configuration tools to set up and manage individual local district assessments:** PCG utilizes a collaborative data inquiry model of support across the school and district.
- **Supports a culture of district-wide data use:** Fosters collaboration to track and improve student outcomes with data-driven decisions.
- **Encourages student-focused teaching by enabling effective problem solving:** Provides real-time performance data to help educators personalize strategies and interventions.

Turnkey Technology System

- Comprehensive student profiles tracking learning and progress
- Class profiles securely displaying student performance data
- Dynamic district data dashboards and reports via PowerBI
- Management of district and provincial assessments
- Leadership dashboards providing key insights for decision-making
- Indigenous tracking services for improved learning outcomes
- Customizable learning supports tailored to district needs
- Advanced AI-powered analytics for predictive insights on student success
- Integration with Student Information Systems (SIS) like MyEd, PowerSchool, Maplewood, and Trillium.

EDPlan Insight™ Packaged Model includes:

- ✓ Technology multi-year licensing
- ✓ Implementation and training
- ✓ Import of historical student records
- ✓ Advanced AI predictive analytics
- ✓ Consulting services
- ✓ AWS Cloud-based hosting services

Implementation, Support & Maintenance, and Operations Services

- **Guided implementation services:** Expert support ensures smooth system integration tailored to each district's needs.
- **Train-the-trainer models to enhance learning:** Empowers staff to train others, promoting sustainable, ongoing learning.
- **Online training for professional development:** On-demand training allows staff to learn at their own pace and stay current.
- **Monthly online user group collaboration meetings:** Facilitates collaboration, sharing best practices, and problem-solving.
- **Online user support services:** Timely support to address issues and ensure smooth system operation.
- **Annual software updates:** Regular updates keep the system current with new features and enhancements.
- **AWS Cloud-Based Canadian Hosting Services:** Secure, responsive, and scalable enterprise cloud computing platform
